Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Election/Restrictions

1. Claim 7 is withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected group, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in Paper No. 7.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 3, 6, 11 and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Matsumoto et al. (DE 3820082 A1).

Matsumoto et al. disclose an ink jet printhead comprising :

a channel plate (fig. 1, element 1) provided with a plurality of ink channels in at least one surface thereof (fig. 3, elements 5, 5a);

a second channel plate having a plurality of ink channels etched into at least one surface thereof (fig. 1, opposing element 1);

actuators respectively associated with each of the ink channels for pressurizing ink contained in the ink channels (electrodes 8, page 6 of translation); and

means defining an ink reservoir (6) communicating with the ink channels via ink supply passages (4a, page 8), wherein said ink reservoir is defined by a base member (2) made of a material different from that of the channel plate (page 8), wherein the channel plate is held in butting engagement with a surface of the base member in which an ink supply passage is formed for establishing fluid communication between the ink reservoir and the ink channels (page 8, last paragraph);

wherein an adhesive layer is provided between the channel plate and the base member (page 9, lines 1-3);

wherein there are two separate channel plates, wherein a portion of the base member forms a support plate sandwiched between the two separate channel plates (fig. 1, page 11).

Allowable Subject Matter

4. Claims 8-10 are allowed.

Claim 5 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art of record does not disclose the channel plate being formed of silicon and a means defining an ink reservoir communicating with the ink channels, wherein said ink reservoir is defined by a base member made of a material different from that of the channel plate, wherein the channel plates is held in butting engagement with a

surface of the base member in which an ink supply passage is formed for establishing fluid communication between the ink reservoir and the ink channels.

With regards to claims 8-10, the prior art of record does not disclose the base member being formed of graphite.

Response to Arguments

5. Applicant's argument that Matsumoto does not disclose separate actuators and channel plates is not persuasive since the electrodes which actuate the piezoelectric channel plates are actuators separate from the piezoelectric channel plates.

Conclusion

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
